Summary

AI Product Manager who turns manual, high-effort workflows into self-running products, shipping **20+ production features** across a live B2B procurement platform and a crypto-tax engine that processes **80K-line-item filings in hours instead of months**. Owns products end-to-end across two startups (FactWise, CryptoTax), from user discovery and PRD to launch, and leads a small team of PMs. Strong bias toward shipping: finds real user pain points and drives them to measurable business outcomes.

Experience

FactWise

May 2025 – Present

AI Product Manager

Mumbai, India

- Shipped **20+ production features** end-to-end (scoped, developed, tested, deployed), from in-app modules (RFQ analytics, quoting, CLM) to **standalone full-stack products** (BOM Mapping, Invoice OCR, Procurement Strategy) that integrate bidirectionally with FactWise data and run live for **enterprise clients**.
- Launched an AI-powered **Invoice OCR system** (FastAPI, React, Azure Document Intelligence) with confidence scoring and multi-level approval workflows; cut client invoice processing from **manual hours to under 2 minutes**, reducing manual work by **90%**.
- Designed **BOM Data Mapper** with visual column mapping, fuzzy matching, PDF zone extraction, and reusable templates; validated with enterprise client who confirmed **60% efficiency gain**, valued at **INR 10–12L/year** per deployment.
- Rebuilt broken **RFQ Analytics** module (the most critical dashboard in the platform) into a production-stable system aggregating vendor bids, landed costs, and real-time analytics; now used actively by **4 enterprise clients**.
- Led and mentored **2 APMs** reporting directly into the role; assigned AI feature work across the legacy app and new client builds (all shipped via Claude Code), reviewed their PRDs, and owned the AI roadmap including the FactWise 4.0 rebuild.

Accion Labs

Apr 2024 – Dec 2024

Product Management Intern

Mumbai, India

- Supported the senior PM on a **Fortune 500 (\$50B+) account (Ingram Micro)** for **9 months**, owning discovery and specification of a unified in-app notification system to replace fragmented email alerts.
- Mapped **3 end-to-end user journeys** (vendor, buyer, admin) across **3 platform modules** (X4A, X4I); authored the complete **PRD** (event triggers, notification hierarchy, and high-fidelity **Figma prototypes**) for engineering handoff.

CryptoTax International Pvt. Ltd.

Product Manager (Part-Time, concurrent with studies)

Remote

- Automated the full crypto-tax pipeline (cost-basis, gain/loss logic, Form 8949 generation), **processing files up to 80K line items in 2–3 hours vs. months manually** at **98–99% accuracy**, using AI-assisted development to replace a manual Excel workflow.
- Scaled the platform to **30+ clients and \$1M+ in processed tax value** across **4 filing seasons**, with automation eliminating error-prone manual review and the need for additional hires.
- Engineered a transaction-decoding data layer by scraping **20+ blockchain explorers** (Etherscan and others) to resolve on-chain transaction intent at scale; the dataset now powers the platform's core product and production backend.
- Led MVP product definition for the consumer tax web app, designing all pages and user flows and reviewing a **4-developer** team's build for logic, correctness, and UX; mentored **1 analyst** on the decoding pipeline.

Projects

[Link](#)

AI-Powered Interview Avatar

[Link](#)

D-ID, AWS, Python | Developed an AI-driven avatar delivering instant, personalized feedback for PM interview practice, scaled to run **100+ mock interviews** and replace slow manual evaluation with instant scoring.

Sales Call Analyzer

[Link](#)

Python, AWS | Created a transcription and sentiment-analysis pipeline scoped to process **500+ sales calls a month**, surfacing conversion patterns to support performance reviews.

Education

NMIMS University

Bachelor of Technology in Computer Engineering

Mumbai, India

GPA: 8.65/10 | **Coursework:** Data Structures, DBMS, Machine Learning, Reinforcement Learning, Statistics, AI

Technical Skills

Analytics: SQL, Python, Excel, Tableau, Data Visualization

Product: Figma, Jira, Agile/Scrum, A/B Testing, UI/UX Design, Wireframing

AI-Assisted Build: Ship full-stack features with Claude Code (FastAPI, React, TypeScript, PostgreSQL, Docker, Azure (Blob, OCR, App Service), AWS)

Leadership / Extracurricular Activities

- Selected for **Shravan Tickoo's cohort** on Mastering Product Management, out of **550+ applicants**.
- Won **Productathon** by leading a team that reduced peer workloads by **90%**; placed **2nd in VC pitch** competition with a market-ready product concept.
- Lead Placement Coordinator** for B.Tech Computer students; represented NMIMS at inter-state recruitment drives.
