

PRD

Problem Statement

Merchants using the Shopify-type platform face challenges in effectively monitoring and analyzing their business performance. The existing analytics dashboard lacks comprehensive and customizable insights, making it difficult for merchants to track key performance indicators (KPIs), understand customer behavior, optimize marketing campaigns, manage inventory, and make data-driven decisions. The absence of intuitive, detailed, and actionable analytics results in inefficiencies, missed opportunities, and hindered business growth.

Objective

To enhance the merchant experience by designing a comprehensive, user-friendly, and customizable analytics dashboard for the Shopify-type platform. The new dashboard aims to:

1. Provide detailed and actionable insights into sales, customer behavior, marketing effectiveness, inventory management, and overall business performance.
2. Enable merchants to customize their dashboard views and reports to suit their specific business needs.
3. Facilitate easy integration with third-party tools and platforms for extended analytics capabilities.
4. Improve the ability of merchants to track and measure KPIs, identify trends, and make data-driven decisions.
5. Enhance overall merchant satisfaction and engagement with the platform, leading to better business outcomes and growth.

Market Research

Market Insights

Ecommerce Platform Market -

Global E-commerce Software Market size was valued at USD 4.82 Billion in 2022 and is poised to grow from USD 5.84 Billion in 2023 to USD 27.44 Billion by 2031, at a CAGR of 21.32% during the forecast period (2024-2031).

Market Snapshot - 2024-2031

Overview of the Shopify Ecosystem

Shopify has established itself as a leading e-commerce platform, serving over 1.75 million merchants worldwide. Merchants on Shopify generated over \$200 billion in sales in 2022

Shopify Market Share In 2024: At a Glance

- Shopify ranked 4th among the top 5 eCommerce platforms worldwide, with a market share of 10.32% in 2024.
- Shopify owns 29% of the e-commerce platform market share in the United States as of 2024.
- The market capital of Shopify is \$104.63 billion as of the 1st quarter of 2024.
- As per CMS usage data, Shopify owns 6.20% of the CMS market share as of April 2024.
- Shopify currently powers 4,628,418 active websites across the world.
- Shopify holds a 23% share in the top 1M websites in 2024.
- Shopify beats WooCommerce with a 19% market share among the top 100k websites as of 2024.
- 62% of Shopify stores are US-based.

Ecommerce Software Market Share

Yaguara.co

Shopify Market Share By Web Traffic

Shopify has a total of **4,628,418 live websites across the globe** and is used by 26% of the websites using ecommerce technologies as of 2024.

Share Of Websites Using Ecommerce Technology Worldwide

Key Market Statistics and Trends

1. Merchant Growth and Usage:

- As of 2023, Shopify supports over 1.75 million businesses in more than 175 countries. This indicates a broad and diverse user base that spans multiple regions and industries

2. Revenue and Sales:

- In 2022, Shopify merchants collectively generated over \$200 billion in sales. This showcases the platform's significant impact on the global e-commerce market.

3. Mobile Commerce:

- Mobile commerce accounts for more than 70% of Shopify store traffic and over 60% of orders. This trend underscores the importance of mobile-friendly solutions and the need for responsive design and mobile optimization .

4. Market Reach:

- Shopify's extensive reach includes a wide range of integrations with other platforms, such as social media, marketing tools, and various sales channels. This integration capability is crucial for expanding market presence and driving sales.

Key Features and Innovations

1. AI and Automation:

- Shopify leverages AI to automate over 60% of customer support tasks, resulting in significant cost savings and efficiency improvements. This automation helps merchants focus on more complex customer interactions and strategic activities..

2. Omnichannel Support:

- The platform supports multiple channels, including email, live chat, SMS, social media, and WhatsApp, providing a unified customer support experience. This omnichannel approach is essential for maintaining consistent communication with customers across different platforms.

3. Integration with Popular Tools:

- Shopify's ability to integrate with over 100 different tools and applications allows merchants to streamline their operations. These integrations include popular services like Google Workspace, Outlook, and various e-commerce and CRM systems.

User Interview

We conducted interviews with existing Shopify users to understand the pain points for the platform, below are the insights:

- **Basic Overview:** Shopify analytics provides a basic overview but lack advanced segmentation.
- **Default Reporting Limitations:** Sales data is too basic; custom reports are limited without higher plans.
- **Multi-Channel Reporting Challenges:** Integrating data from platforms like Amazon and Flipkart is cumbersome and costly.
- **Customer Analytics Gaps:** Missing detailed metrics like customer lifetime value and cohort analysis.
- **No Built-in A/B Testing:** Essential for optimization but not supported by Shopify.
- **Basic Inventory Analytics:** Limited tools for demand forecasting and inventory turnover.
- **Inadequate Financial Reporting:** Requires third-party apps, adding complexity and costs.
- **Misleading Cohort Analysis:** Repeat customers can skew data due to order cancellations.
- **Complicated Returns Accounting:** Affects reliability of net sales figures and gross margin calculations.
- **Inaccurate Shipping Status for Returns:** Impacts total and net sales data.
- **Rigid Analytics Platform:** Custom reports often require third-party apps or developers, leading to extra expenses.

User Persona

Platform Analytics Dashboard

User Persona	Role	Responsibilities	Pain Points	Dashboard Needs
Ananya Sharma	Product Manager	- Oversee development of merchant dashboard - Analyze usage data Collaborate with teams for product changes	- Identifying underused features - Tracking effectiveness of new features -Need for real-time insights	- Detailed feature usage metrics - Conversion and funnel analysis - Customizable reports for product performance
James Lee	Customer Support Manager	- Manage support team	- Lack of insights into common	- Support ticket volumes, response times, and resolution rates

User Persona	Role	Responsibilities	Pain Points	Dashboard Needs
		- Analyze support ticket trends - Provide feedback to product and engineering teams	- merchant issues - Tracking support intervention effectiveness - Need comprehensive support metrics	- Trends in common issues - Integration with CRM and support tools
Amit Patel	Engineering Lead	- Ensure dashboard technical performance - Monitor system performance metrics - Address technical issues	- Need real-time performance data - Understanding the impact of performance on engagement - Visibility into technical issues	- Real-time system performance metrics - Insights into performance-merchant activity correlation - Alerts for critical system issues
Laura Perez	Data Scientist	- Analyze data sets - Develop predictive models - Provide data-driven recommendations	- Need high-quality data - Difficulty integrating multiple data sources - Limited tools for analysis	- Access to detailed data - Tools for building predictive models - Integration with data analysis software

Merchant Analytics Dashboard

Name	Role	Company Size	Goals	Pain Points	Analytics Needs
Arjun	Owner	Small Business	- Increase sales and revenue	- Limited time to analyze data	- Sales trends and revenue growth analysis - Customer behavior insights - Inventory management - Marketing campaign effectiveness
Emma	Marketing Manager	Medium Business	- Optimize marketing campaigns - Improve customer engagement	- Difficulty in measuring campaign ROI - Identifying customer preferences	- Campaign performance metrics - Customer segmentation and targeting - Social media engagement - Conversion rates
Daniel	Inventory Manager	Large Enterprise	- Ensure optimal inventory levels - Minimize stockouts and overstock situations	- Managing inventory across multiple channels and stores on Shopify - Forecasting demand accurately	- Inventory turnover rate - Stockout and overstock rates - Lead time and supplier performance - Demand forecasting - Single solution to view complete analytics
Amina	E-commerce Manager	Small Business	- Drive online sales	- Understanding	- Traffic sources and user behavior

Name	Role	Company Size	Goals	Pain Points	Analytics Needs
			- Improve website performance	website traffic sources - High bounce rates	- Conversion rates - Page load times and site performance - User engagement metrics

High-Level Solutions

Merchant Analytics Dashboard

1. **L1 Dashboards (High-Level Summary):** Provide an executive overview of critical business metrics such as revenue, strategic goals, and system reliability.
 - **Audience:** Executives and senior management
 - **Purpose:** Overview of critical business metrics
 - **Examples:** Revenue, profit margins, strategic goals, system reliability
2. **L2 Dashboards (Detailed Insights):** Offer detailed insights for mid-level managers, including sales performance, marketing effectiveness, and financial analysis.
 - **Audience:** Mid-level managers and functional teams
 - **Purpose:** Actionable insights from high-level metrics
 - **Examples:** Sales by region, campaign ROI, income statements
3. **L3 Dashboards (Granular Analysis):** Enable deep data exploration for analysts, focusing on customer segmentation, supply chain analytics, and web traffic behavior.
 - **Audience:** Analysts and specialists
 - **Purpose:** Deep exploration of specific data points
 - **Examples:** Customer behavior, supply chain, web traffic analysis

Feature for Merchant Dashboard:

1. **Dashboard Categorization for Easy Access:** Enhance user experience by organising the dashboard into easily navigable categories.
2. **Customizable Dashboard Layouts:** Provide users with flexibility in designing their dashboard layouts
3. **Seamless Integration:** Integrate with third-party platforms for a comprehensive view of business operations.
4. **Merchant Master Assistance:** Offer AI-driven assistance for education, queries, and business insights.
5. **Help Me Grow:** Leverage existing data to provide actionable insights and predictive analysis.
6. **Merch Mate:** AI-driven account management to assist with overall growth on the platform.
7. **Reviews Patrol Dashboard:** Monitor and analyze customer reviews using sentiment analysis.
8. **Unified Dashboard for Multiple Stores:** Allow merchants to monitor multiple stores from a single dashboard.
9. **Biz Alert:** Enable users to track specific metrics and receive email alerts.

10. **Cost Analysis Based on Assistance Suggestions:** Provide cost analysis related to the suggestions provided by the assistance tools.
11. **Health Score of the Current Business:** Assess and display the overall health score of the merchant's business
12. **Support for Users - Ticketing System:** Provide integrated support within the analytics dashboard to address user issues promptly.

Platform Analytics Dashboard

1. **L1 Dashboard (High-Level Summary Reports):** Quick insights without diving into details provide an overview of the overall health and performance of the platform.
2. **L2 Dashboard (Intermediate Detail Reports):** Provides in-depth analysis for Revenue segmentation, retention analysis, etc. to help merchant
3. **L3 Detailed Drill-Down Reports:** Provides advanced analysis and precise exploration of specific data points like merchant behavior analysis, etc.

Feature for Platform Dashboard:

1. **Support for the Users - Ticketing System in the Same Page of the Dashboards:** Provide seamless support by integrating a ticketing system within the dashboard.
2. **Integration between CRM/Customer Support Tool and the Platform Analytics Dashboard:** Enhance visibility into customer interactions by integrating CRM and customer support tools with the analytics dashboard.
3. **PBAC - Persona Based Access Control:** Implement role-based access to ensure that employees only access relevant data and tools.
4. **Automated Alerts to the Account Manager for Declining Merchant Performance:** Proactively address declining merchant performance with automated alerts.
5. **In-App Notifications and Email Notifications:** Keep employees informed with timely notifications.
6. **AI-Based Ticket Reader:** Use AI to analyse support tickets and identify top features or reports that are not working properly.
7. **User Sentiment Analysis:** Monitor and analyze user sentiment to gauge merchant satisfaction.
8. **Wendy - AI Support System:** Facilitate collaboration and automate communication with an AI support system.
9. **Collaborative Dashboards between Teams:** Enable teams to collaborate effectively through shared dashboards.

Solutions Prioritization

Merchant Analytics Dashboard Solutions Prioritization

High	Medium	Low
- Easy-to-Use Dashboard with Drill-Down Reports - Dashboard Categorization for Easy Access - Merchant Master Assistance - Unified Dashboard for Multiple Stores - Help Me Grow (Predictive Analysis) - Merch Mate AI Account Manager	- Customizable Dashboard Layouts - Reviews Patrol Dashboard - Seamless Integration - Support for Users - Ticketing System - Cost Analysis Based on Assistance Suggestions	- Biz Alert (Email Notifications) - Health Score of the Current Business

Platform Analytics Dashboard Solutions Prioritization

High	Medium	Low

Detailed Solution

Merchant Dashboard Detailed solutions:

Core functioning of the Merchant Dashboard : Easy-to-Use Dashboards with L1->L2->L3 Drill-Down Reports :

The user will just hover over the L1 dashboard to see Quick insights without diving into details, they can further hover over L2 dashboard for in depth-detailed insights and on L3 dashboard to see advanced and precise data analysis details

Objective for Merchants: Enable merchants to access detailed, multi-level reports easily to understand various aspects of their business.

Benefits for Merchants:

- **Improved User Experience:** Easy access to comprehensive data, actionable insights, and prompt support enhance overall satisfaction.
- **Proactive Management:** Automated alerts and AI recommendations help merchants address potential issues before they escalate.
- **Strategic Growth:** Data-driven insights and personalized recommendations enable merchants to optimize their operations and grow their business.
- **Holistic View:** Integration with CRM and support tools provides a complete picture of business performance and customer interactions.
- **Merchant Performance:** Helps in Enhanced Decision Making, efficient operations, Optimised profitability, gives detailed customer insights and helps manage multiple stores.

Types of Dashboard:

1. **Sales Dashboard:** Track overall revenue generated, sales trends, and top-selling products.
2. **Marketing Dashboard:** Focuses on marketing efforts, including campaign performance, lead generation, and customer acquisition.
3. **Supply Chain Dashboard:** Monitors inventory, procurement, and logistics.
4. **Customer Service and Behaviour Dashboard:** Tracks customer inquiries, response times, and satisfaction.
5. **Web Performance Dashboard:** Provides an overall view of online sales and website performance.
6. **Product Performance Dashboard:** Analyzes individual product performance.
7. **Financial Dashboard:**
8. **Multi-Store Management Dashboard:** Helps seamlessly manage mutli retail stores for different products or multi-site stores of same products in a centralised view dashboard and helps integrate data.

Detailed Working Solutions of Working Platform

- **L1 Dashboards (High-Level Summary):** These dashboards provide an overview of critical business metrics. They're designed for executives and senior management. Examples include:
 - **Business Overview Dashboard:** Summarizes total revenue, profit margins, and high-level KPIs.
 - **Executive Scorecard:** Visualizes strategic goals, market share, and overall performance.
 - **Operational Health Dashboard:** Monitors uptime, service levels, and system reliability.
- **L2 Dashboards (Detailed Insights):** Dashboards at this level break down high-level metrics into actionable categories. They cater to mid-level managers and functional teams.

Examples include:

- **Sales Performance Dashboard:** Analyzes sales by region, product, and channel.
- **Marketing Effectiveness Dashboard:** Evaluates campaign ROI, lead conversion rates, and customer acquisition costs.
- **Financial Statement Analysis:** Provides detailed income statements, balance sheets, and cash flow reports.
- **L3 Drill-Down Dashboards (Granular Analysis):** These dashboards allow deep exploration of specific data points. They're useful for analysts and specialists. Examples include:
 - **Customer Segmentation Dashboard:** Breaks down customer behavior by demographics, preferences, and lifetime value.
 - **Supply Chain Analytics:** Examines inventory levels, supplier performance, and logistics efficiency.
 - **Web Traffic Drill-Down:** Analyzes user behavior on specific web pages, click-through rates, and conversion paths.

Features for Merchant Dashboard:

1. Dashboard Categorization for Easy Access

Objective: Enhance user experience by organizing the dashboard into easily navigable categories.

Features

- **Categories Setup:** Define Categories and establish main categories:

- **Sales:** Display metrics such as total sales, sales by product/category, sales trends, and top-selling products.
- **Marketing:** Marketing campaign performance (impressions, clicks), lead generation, conversion rates, click-through rates, Customer Acquisition Cost (CAC), and return on ad spend (ROAS), Customer Lifetime Value (CLV).
- **Inventory:** Show current stock levels, stock alerts, inventory turnover rates, and reorder recommendations.
- **Product:** Track individual product sales, margins, and return rates.
- **Finance:** Include revenue reports, expense tracking, profit margins, and financial forecasts.
- **Customer Behaviour:** Offer insights into customer behavior, present recent reviews, review trends, average ratings, and sentiment analysis.
- **Web-performance:** Traffic sources, conversion rates, bounce rates, cart abandonment rates, and average order value (AOV), .Average Session Duration, SEO Metrics,
- **Order fulfilment performance:** Shows shipping cost per order, internal order cycle time, order fulfilment cycle time, On-time shipping rate, order fill rate.
- **Customizable Tabs:**
 - Users can drag tabs to reorder them.
 - Option to hide/show specific tabs based on user preference.
- **Widgets:**
 - Modular widgets that display key metrics (e.g., sales graphs, inventory alerts).
 - Users can add/remove widgets from their dashboard easily.
- **Search and Filter:**
 - Implement a global search bar for quick access to specific reports or metrics.
 - Filters to view data by date range, product category, or performance metrics.

User Behavior and Benefits

- **Behavior:** Users will frequently navigate the dashboard, accessing specific sections relevant to their needs.
- **Benefits:** Simplified navigation, improved efficiency, and quick access to relevant data.
- **User Actions:** Customize tabs and widgets, use the search bar for quick access, apply filters to narrow down data.

2. Customizable Dashboard Layouts

Objective: Provide users with flexibility in designing their dashboard layouts

Features:

- **Multiple Layouts:** Offer pre-designed layout templates (e.g., Grid, List, Tabbed) to cater to different user needs.
- **Drag-and-Drop Interface:** Users can easily rearrange dashboard components through a simple drag-and-drop mechanism.

- **Save Layouts:** Allow users to save multiple layouts (e.g., "Daily Overview," "Monthly Reports") with easy switching capabilities.
- **Layout Management:** Provide a settings menu for managing saved layouts, including options to revert to default settings.

User Behavior and Benefits

- **Behavior:** Users will tailor their dashboard layouts based on their work routines and preferences.
- **Benefits:** Enhanced personalization, improved workflow, and faster data access.
- **User Actions:** Choose a preferred layout, drag-and-drop widgets to create custom layouts, save and manage multiple layouts.

3. Seamless Integration

Objective: Integrate with third-party platforms for a comprehensive view of business operations.

Features:

- **Default Connectors:** Create built-in connectors for popular platforms (e.g., Shopify, QuickBooks, Google Analytics) to facilitate easy integration.
- **API Integration:** Develop a robust API that allows users to connect with additional platforms not covered by default connectors.
- **Data Syncing:** Enable real-time syncing or scheduled updates to ensure the dashboard reflects the latest data.
- **Integration Management:** Offer a user-friendly interface for managing active integrations, allowing users to enable/disable or configure settings.

User Behavior and Benefits

- **Behavior:** Users will connect their existing platforms to the dashboard for unified data access.
- **Benefits:** Centralized data view, real-time updates, and streamlined business operations.
- **User Actions:** Set up integrations using default connectors, configure API integrations, manage integration settings, ensure data syncing.

4. Merchant Master Assistance

Objective: Offer AI-driven assistance for education, queries, and business insights.

Features:

- **Prompt-Based AI Assistance:** Context-sensitive AI assistance that provides relevant tips and answers based on user activity on the dashboard.
- **Educational Resources:** Create a knowledge base with articles, video tutorials, and best practice guides related to dashboard functionalities.
- **Interactive Help:** Integrate chatbots or virtual assistants for real-time support and user walkthroughs for dashboard features.

User Behavior and Benefits

- **Behavior:** Users will seek AI assistance and educational resources to optimize their use of the dashboard.
- **Benefits:** Improved understanding of features, quick problem resolution, and better decision-making.

- **User Actions:** Access AI assistance for help, explore the knowledge base, interact with chatbots for support.

5. Help Me Grow

Objective: Leverage existing data to provide actionable insights and predictive analysis.

Features

- **Data Analysis:** Utilize historical data to generate trend analyses, identifying strengths and areas for improvement.
- **Predictive Insights:** Implement machine learning algorithms to forecast future performance and recommend actions for growth optimization.
- **Actionable Recommendations:** Deliver tailored suggestions to improve sales, enhance customer satisfaction, and optimize inventory levels.
- **Growth Tracker:** Integrate a visual growth tracker that displays progress against set goals based on provided insights.

User Behavior and Benefits

- **Behavior:** Users will analyze trends and follow recommendations to enhance business performance.
- **Benefits:** Informed decision-making, proactive management, and continuous improvement.
- **User Actions:** Review data analysis, consider predictive insights, implement actionable recommendations, monitor progress using the growth tracker.

6. Merch Mate

Objective: AI-driven account management to assist with overall growth on the platform.

Features

- **AI Account Manager:** Develop an intelligent assistant that provides strategic advice and personalized recommendations based on user data.
- **Growth Strategies:** Generate customized growth strategies aligned with business data and industry trends.
- **Performance Monitoring:** Continuously track KPIs and provide actionable suggestions to improve platform performance.
- **Interactive Guidance:** Facilitate virtual consultations or interactive sessions with the AI for personalized assistance and strategy discussion.

User Behavior and Benefits

- **Behavior:** Users will engage with the AI account manager for strategic guidance and performance monitoring.
- **Benefits:** Tailored growth strategies, enhanced performance, and interactive support.
- **User Actions:** Consult the AI for advice, implement suggested growth strategies, monitor performance, participate in virtual consultations.

7. Reviews Patrol Dashboard

Objective: Monitor and analyze customer reviews using sentiment analysis.

Detailed Solutions

- **Sentiment Analysis:** Implement natural language processing (NLP) techniques to evaluate customer review sentiments (positive, negative, neutral).
- **Categorise Reviews:** Helps merchants understand product performance with summarised reviews.

For example: Cloth quality is compromised/not good (total 24 reviews), Battery failed within a month (total 2 reviews), etc.

- **Review Dashboard:** Create a dedicated dashboard section that visualizes sentiment trends, recurring themes, show summarised product reviews and key review metrics.
- **Alerts for Negative Sentiments:** Set up alert mechanisms that notify users about negative sentiments to address issues promptly.
- **Response Recommendations:** Provide AI-generated response suggestions for reviews based on sentiment analysis outcomes.

User Behavior and Benefits

- **Behavior:** Users will monitor customer reviews and respond promptly to feedback.
- **Benefits:** Improved customer satisfaction, proactive issue resolution, and better reputation management.
- **User Actions:** Regularly check the review dashboard, set up sentiment alerts, follow AI-generated response recommendations.

8. Unified Dashboard for Multiple Stores

Objective: Allow merchants to monitor multiple stores from a single dashboard.

Features:

- **Multi-Store Integration:** Enable integration of data from multiple Shopify stores into a consolidated dashboard view.
- **Store Selector:** Implement a store selector tool that allows users to switch between individual stores or view combined metrics.
- **Consolidated Metrics:** Display aggregated metrics, such as total sales, overall inventory levels, and cumulative customer reviews across all stores.
- **Custom Reports:** Generate comprehensive reports that incorporate data from multiple stores for in-depth analysis.

User Behavior and Benefits

- **Behavior:** Users will manage multiple stores efficiently from one centralized dashboard.
- **Benefits:** Streamlined operations, comprehensive data analysis, and simplified multi-store management.
- **User Actions:** Integrate multiple stores, use the store selector for detailed views, analyze consolidated metrics, generate custom reports.

9. Biz Alert

Objective

Enable users to track specific metrics and receive email alerts.

Features:

- **Alert Configuration:** Allow users to customize alerts for specific metrics (e.g., sales thresholds, low inventory levels, negative customer feedback).

- **Custom Notifications:** Provide options for users to customize alert content and frequency (e.g., immediate alerts, daily summaries, weekly digests).
- **Email Integration:** Integrate with email services to facilitate sending alerts and notifications directly to users.
- **Alert Dashboard:** Create a dedicated section within the dashboard for managing and reviewing configured alerts and notifications.

User Behavior and Benefits

- **Behavior:** Users will configure alerts to stay informed about critical metrics and issues.
- **Benefits:** Timely updates, proactive management, and improved operational efficiency.
- **User Actions:** Set up and customize alerts, choose notification preferences, manage alerts from the dedicated dashboard section.

10. Cost Analysis Based on Assistance Suggestions

Objective: Provide cost analysis related to the suggestions provided by the assistance tools.

Features:

- **Cost Breakdown:** Offer a detailed cost analysis for implementing AI-generated suggestions or recommended actions.
- **Budget Tracking:** Include tools to help users track expenses related to growth strategies or operational adjustments.
- **ROI Analysis:** Provide insights into the return on investment (ROI) for recommended actions and improvements, helping users understand the financial impact.

User Behavior and Benefits

- **Behavior:** Users will evaluate the financial impact of recommended actions and manage budgets effectively.
- **Benefits:** Informed financial decisions, effective budget management, and enhanced ROI understanding.
- **User Actions:** Review cost analysis, track budgets, analyze ROI, make informed decisions based on financial insights.

11. Health Score of the Current Business

Objective: Assess and display the overall health score of the merchant's business.

Features

- **Health Score Metrics:** Define key metrics contributing to the health score, such as sales performance, customer satisfaction levels, and inventory turnover rates.
- **Visual Indicators:** Use visual tools (graphs, gauges, color-coded alerts) to represent the business health score in an easily digestible format.
- **Improvement Recommendations:** Provide actionable insights and recommendations for improving the health score based on current performance metrics.

User Behavior and Benefits

- **Behavior:** Users will regularly monitor the health score and follow recommendations to maintain or improve it.

- **Benefits:** Comprehensive business health overview, proactive management, and continuous improvement.
- **User Actions:** Monitor health score metrics, analyze visual indicators, implement improvement recommendations, track progress.

12. Support for Users - Ticketing System

Objective: Provide integrated support within the analytics dashboard to address user issues promptly.

Features:

- **Embedded Ticketing System:** Users can submit support tickets directly from the dashboard.
- **Ticket Status Tracking:** View the status and updates of submitted tickets in real-time.
- **Priority Handling:** Mark tickets by urgency and importance.

User Behavior and Benefits

- **Behavior:** Users can raise concerns about the dashboard by raising ticket.
- **Benefits:** Faster resolution of issues improves satisfaction and minimizes downtime.
- **User Actions:** Raise tickets for issues faced by the customers, track the ticket history (Resolution TAT), update the tickets, rate the ticket resolution (ratings from 1-10; 1-poor & 10-great).

Platform Analytics Dashboard Detailed Solutions:

Core Functioning of the Platform Dashboard: Easy-to-Use Dashboards - L1->L2->L3 Drill-Down Reports

The user will just hover over the L1 dashboard to see Quick insights without diving into details, they can further hover over L2 dashboard for in depth-detailed insights and on L3 dashboard to see advanced and precise data analysis details

Objective for employees: To enhance the merchant experience on Shopify by providing employees with a robust, integrated analytics dashboard that facilitates efficient data-driven decision-making, support, and collaboration. Enable employees to access and analyze detailed, multi-level reports to understand various aspects of merchant performance.

Benefits for Employees

- **Increased Efficiency:** Streamlined workflows and automation reduce manual tasks, allowing employees to focus on higher-value activities.
- **Better Collaboration:** Shared dashboards and AI support enhance team coordination and communication.
- **Improved Decision-Making:** Detailed insights and predictive analytics support informed and strategic decisions.
- **Enhanced Customer Support:** Integrated ticketing and CRM tools enable timely and effective issue resolution.

Detailed Solutions:

- **L1 Dashboard (High-Level Summary Reports):** These reports provide an overview of the overall health and performance of the platform.
1. **Merchant Engagement Dashboard:** Total number of active merchants, new merchant sign-ups vs. churn rate, daily active users (DAU), weekly active users (WAU), and monthly active users (MAU)

2. **Sales Performance Overview:** Total sales volume, Average order value (AOV), Conversion rates, Sales by region and product category
3. **Platform Usage Summary:** Most used features and tools, average session duration, number of app installations and integrations used.
 - **L2 Dashboard (Intermediate Detail Reports):** These reports dig deeper into specific areas to identify trends and patterns.
 1. **Merchant Retention and Churn Analysis:** Cohort analysis by sign-up date, Churn rates segmented by business size, industry, and geography, Reasons for merchant churn (feedback, support tickets, etc.)
 2. **Revenue Segmentation:** Revenue contribution by different merchant segments (e.g., small, medium, large businesses), Top-performing merchants and their characteristics, Sales trends over time (monthly, quarterly)
 3. **Feature Adoption and Usage:** Adoption rates of new features and tools, Usage frequency and depth of core platform features, Heatmaps of feature usage within the merchant dashboard
 - **Level 3 (L3) - Detailed Drill-Down Reports:** These reports provide granular insights for specific analysis and action.
 1. **Merchant Behavior Analysis:** Detailed user journey and behavior flow analysis, segmentation of merchants based on behavior patterns (e.g., power users vs. casual users), interaction frequency with support and help resources
 2. **Detailed Sales Analytics:** Product-level sales performance and inventory turnover, customer segmentation analysis (e.g., repeat customers vs. one-time buyers), cross-sell and up-sell performance analysis
 3. **Support and Satisfaction Metrics:** Detailed analysis of support ticket volumes, response times, and resolution rates, customer satisfaction scores (CSAT) and Net Promoter Score (NPS) trends, feedback analysis from surveys and reviews

Other Detailed Solutions:

Tracking Merchant Stickiness: To track and enhance merchant stickiness on Shopify, focus on these specific metrics and analyses:

- **Engagement Metrics:** Frequency of logins and session duration, feature and tool engagement rates, participation in community forums and events
- **Satisfaction and Feedback:** NPS and CSAT scores, direct feedback from surveys, reviews, and support interactions, sentiment analysis of feedback and support tickets
- **Value Metrics:** Revenue growth and business performance of merchants, ROI of using Shopify (e.g., increased sales, improved efficiency), Lifetime value (LTV) of merchants on the platform

Features for Platform Dashboard:

1. Support for the Users - Ticketing System in the Same Page of the Dashboards

Objective: Provide seamless support by integrating a ticketing system within the dashboard.

Features:

- Integrated ticketing system for creating, tracking, and managing support tickets.
- Quick access to ticket status and history directly from the dashboard.

Employee Behavior and Benefits:

- **Behaviour:** Employees can manage and respond to support tickets without leaving the analytics dashboard.
- **Benefits:** Improved efficiency in handling support queries and reduced context-switching, leading to faster issue resolution.

Impact on Merchant Experience: Merchants benefit from quicker response times and more effective support.

Cross-Functional Involvement:

- **Support Team:** Integrate ticketing workflows.
- **Development Team:** Ensure smooth integration with the dashboard.

2. Integration between CRM/Customer Support Tool and the Platform Analytics Dashboard

Objective: Enhance visibility into customer interactions by integrating CRM and customer support tools with the analytics dashboard.

Features:

- Unified view of tickets, issues, and customer details.
- Synchronization of data between CRM, support tools, and the analytics dashboard.

Employee Behavior and Benefits:

- **Behaviour:** Employees can access customer data and support history directly from the analytics dashboard.
- **Benefits:** Comprehensive view of customer interactions and improved ability to provide personalized support.

Impact on Merchant Experience: Merchants receive more personalized and informed support, improving satisfaction and loyalty.

Cross-Functional Involvement:

- **CRM and Support Tool Teams:** Facilitate data integration.
- **IT and Security Teams:** Ensure data privacy and security.

3. PBAC - Persona Based Access Control

Objective: Implement role-based access to ensure that employees only access relevant data and tools.

Features:

- Define access levels based on employee roles.
- Customizable access permissions for different user personas.

Employee Behavior and Benefits:

- **Behaviour:** Employees access data and tools relevant to their role, enhancing efficiency and security.
- **Benefits:** Streamlined access to necessary tools, data, enhanced security and compliance with data protection regulations.

Impact on Merchant Experience: Merchants' data is protected, and they receive accurate support from knowledgeable employees.

Cross-Functional Involvement:

- **HR and IT Teams:** Define roles and access levels.
- **Development Team:** Implement access control mechanisms.

4. Automated Alerts to the Account Manager for Declining Merchant Performance

Objective: Proactively address declining merchant performance with automated alerts.

Features:

- Set performance thresholds and trigger automated alerts.
- Notify account managers of declining performance for timely intervention.

Employee Behavior and Benefits

- **Behaviour:** Account managers receive alerts and take proactive measures to support merchants.
- **Benefits:** Timely awareness of issues and ability to take preventive actions before problems escalate.

Impact on Merchant Experience: Merchants benefit from proactive support, preventing potential issues and maintaining performance.

Cross-Functional Involvement:

- **Data Science Team:** Develop alert algorithms.
- **Account Management Team:** Define intervention protocols.

5. In-App Notifications and Email Notifications

Objective: Keep employees informed with timely notifications.

Features:

- In-app notifications for real-time updates.
- Email notifications for critical alerts and updates.

Employee Behavior and Benefits:

- **Behavior:** Employees stay updated on important events and actions required.
- **Benefits:** Improved responsiveness to critical events and better communication and collaboration within teams.

Impact on Merchant Experience: Merchants receive timely support and updates, enhancing their overall experience.

Cross-Functional Involvement:

- **Development Team:** Implement notification systems.
- **Communications Team:** Define notification content and protocols.

6. AI-Based Ticket Reader

Objective: Use AI to analyse support tickets and identify top features or reports that are not working properly.

Features:

- AI-driven analysis of ticket content.
- Automated identification of common issues and feature requests.

Employee Behavior and Benefits:

- **Behaviour:** Employees get insights into frequent issues and areas needing improvement.
- **Benefits:** Reduced time in analysing support tickets and better understanding of common problems and user needs.

Impact on Merchant Experience: Merchants benefit from faster resolution of common issues and improvements in platform features.

Cross-Functional Involvement:

- **AI and Data Science Teams:** Develop and train AI models.
- **Support Team:** Provide feedback on AI accuracy and usefulness.

7. User Sentiment Analysis

Objective: Monitor and analyze user sentiment to gauge merchant satisfaction.

Features:

- Natural language processing (NLP) to analyze user feedback.
- Sentiment analysis reports integrated into the dashboard.

Employee Behavior and Benefits:

- **Behaviour:** Employees monitor sentiment trends and take action based on feedback.
- **Benefits:** Better understanding of merchant satisfaction and ability to address negative sentiments proactively.

Impact on Merchant Experience: Merchants experience improved satisfaction through responsive and informed support.

Cross-Functional Involvement:

- **Data Science Team:** Develop sentiment analysis algorithms.
- **Support and Communications Teams:** Respond to sentiment trends.

8. Wendy - AI Support System to Enable Collaboration and Automated Communication

Objective: Facilitate collaboration and automate communication with an AI support system.

Features:

- AI-powered assistant for real-time collaboration.
- Automated communication tools for team coordination.

Employee Behavior and Benefits:

- **Behaviour:** Employees use Wendy for seamless collaboration and communication.
- **Benefits:** Enhanced team collaboration and reduced manual communication workload.

Impact on Merchant Experience: Merchants receive consistent and coordinated support, improving their experience.

Cross-Functional Involvement:

- **AI Development Team:** Develop Wendy's capabilities.
- **Team Leads:** Define collaboration workflows.

9. Collaborative Dashboards between Teams

Objective: Enable teams to collaborate effectively through shared dashboards.

Features:

- Shared dashboards accessible to multiple team members.
- Collaborative tools for real-time data sharing and analysis.

Employee Behavior and Benefits:

- **Behaviour:** Teams collaborate on shared dashboards for unified insights and actions.
- **Benefits:** Improved teamwork, data sharing and unified approach to solving problems and supporting merchants.

Impact on Merchant Experience: Merchants benefit from cohesive and well-informed support, leading to better outcomes.

Cross-Functional Involvement:

- **Development Team:** Implement collaborative features.
- **Team Leads:** Facilitate inter-team collaboration.

Metrics

Merchant Analytics Dashboard

Baseline Metric	Leading Metrics	Lagging Metrics
Total Active Merchants	New merchant sign-ups	Merchant retention rate
	Merchant engagement in onboarding process	Churn rate of merchants
Monthly Active Merchants (MAM)	Weekly active merchants (WAM)	Merchant churn rate

	Daily active merchants (DAM)	Monthly revenue per active merchant
Total Revenue	Average transaction size	Quarterly revenue
	Number of transactions	Annual revenue growth
Merchant Onboarding Rate	Time taken to complete onboarding	Long-term retention of newly onboarded merchants
	Number of support queries during onboarding	Subsequent engagement levels post-onboarding
Feature Adoption Rate	Engagement with onboarding/tutorials for new features	Long-term usage consistency of features
	Feature trial rates	Impact on overall platform usage and revenue
Retention Rate		

Platform Analytics Dashboard

Baseline Metrics	Leading Metrics	Lagging Metrics
Number of active internal users	Frequency of dashboard logins (daily, weekly, monthly)	Time spent on key features
Support ticket volume	Time to first support interaction	Resolution time for support tickets
Average response time for support	Escalation rate	Support satisfaction score
System uptime	Latency and response times for key actions	Frequency of performance issues
User satisfaction score	Feedback on specific features	Common feedback themes
Number of active reports created	Frequency of report generation	Customization rate
Number of feature requests	Interaction with specific features	Feature usage rates

https://docs.google.com/spreadsheets/d/10JtSBUhFfEPNY5L8L_Hndlvyo0Ho0ne1wkcmRWVjlQ/edit?gid=844054578#gid=844054578

Activation

To understand if the merchant is an activated user of the analytics dashboard:

1. Set Benchmarks for Usage:

- Logging in at least once a day
- Viewing at least one dashboard a day
- Customizing at least one report within the first month of signup
- Setting up at least two automated alerts/notifications.

2. Engagement Scoring System:

- Engagement scoring system based on the benchmarks. Points to be assigned for each action completed and feature utilized.
 - Daily login: 10 points
 - Daily report view: 10 points
 - Customized report/dashboard: 30 points
 - Weekly use of customer analytics: 25 points
 - Automated alert setup: 15 points each

3. **Identify Activated Merchants:**

- The total engagement score can be calculated for each merchant. Merchant crossing this threshold score (For eg: 200 points with a minimum of 30 points from each category mentioned above) will represent full utilization.

4. **Monitor Continuous Usage:**

- Regularly review the engagement scores to ensure merchants maintain their activation status over time. Identify any drop-offs in usage and address potential issues promptly.

North Star Metric - Platform Analytics Dashboard

No. of insights/recommendations implemented by merchant

North Star Metric - Merchant Analytics Dashboard

Monthly Recurring Revenue for a merchant
