Problem Statement

Objective: To design a game that engages patients with depression by providing a fulfilling experience through elements such as meditation, storytelling, challenges, wisdom, and community.

Market Research

The Current Scenario

Mental health issues are a global concern, affecting a significant portion of the population. Here are some alarming statistics that underscore the magnitude of the problem:

- **Prevalence:** One in every five individuals grapples with symptoms of some form of mental health illness.

- **Onset at a Young Age:** Half of all mental health conditions begin by the age of 14, and three-quarters develop by the age of 24.
- **Global Impact:** Approximately 970 million people worldwide struggle with some form of mental illness.
- **Mortality Rate:** Mental disorders, including anxiety and depression, account for 14.3% of deaths worldwide, translating to roughly 8 million deaths each year.
- **Increase in Depressive Symptoms:** The number of people experiencing depressive symptoms has grown from a base of about 193 million to 246 million worldwide, marking a 28% increase.

Mental Health Care in India

The mental health care system in India is currently under-resourced and under-staffed, as evidenced by the following statistics:

- **Shortage of Professionals:** There are only 0.3 psychiatrists, 0.07 psychologists, and 0.07 social workers per 100,000 people in India.
- **Comparison with Developed Countries:** The ratio of psychiatrists in developed countries stands at 6.6 per 100,000, a stark contrast to India's 0.3 per 100,000.
- **Lack of Mental Health Facilities:** The average number of mental hospitals globally is 0.04 per 100,000, while in India, it's a mere 0.004 per 100,000.

These figures highlight the urgent need for increased investment and innovation in mental health care, particularly in developing countries like India.

Types of Depression

Category	Disorder	Description (symptoms)	Approximated (In %) in India
Mood Disorders	Major Depressive Disorder (MDD)	Sadness, Hopelessness, loss of interest, changes in sleep, appetite, energy levels	4.5 - 5
	Bipolar Disorder	Alternate periods of depression and mania	0.3 - 1.2
	Dysthymia (Persistent Depressive Disorder)	Chronic, less severe form of depression lasting for at least two years	
Anxiety Disorders	Generalized Anxiety Disorder (GAD)	Excessive, uncontrollable worry about life, restlessness, fatigue, muscle tension	3.5 - 3.6
	Panic Disorder	Recurrent, unexpected panic orders	1.4 - 1.5
	Social Anxiety Disorder (Social Phobia)	Intense fear of social situations and being judged	2.5 - 3
	Specific Phobias	Irrational and excessive fear of specific objects or situations	3 - 5
	Obsessive-Compulsive Disorder (OCD)	Persistent, unwanted thoughts (obsessions) and repetitive behaviors	0.6 - 3
Trauma-Related Disorders	Post-Traumatic Stress Disorder (PTSD)	Persistent mental and emotional stress following exposure to a traumatic event	0.5 - 1
Psychotic Disorders	Schizophrenia	Severe mental disorder	0.4 - 1
	Schizoaffective Disorder	Combination of symptoms of schizophrenia and mood disorder	0.1 - 0.3
Eating Disorders	Anorexia Nervosa	Intense fear of gaining weight	0 - 0.1
	Bulimia Nervosa	Episodes of binge eating followed by compensatory behaviors such as vomiting, fasting, or excessive exercise	0.2 - 0.3
	Binge-Eating Disorder	Recurrent episodes of eating large quantities	0.7 - 2

Personality Disorders	Borderline Personality Disorder (BPD)	Instability in relationships, self-image, and emotions, with impulsive behaviors and fear of abandonment	0.2 - 0.7
	Antisocial Personality Disorder	Disregard for others' rights, impulsivity, deceitfulness, and lack of remorse	0.5 - 1
	Narcissistic Personality Disorder	Grandiosity, need for admiration, and lack of empathy	0 - 0.5
Neurodevelopmental Disorders	Attention-Deficit/Hyperactivity Disorder (ADHD)	Persistent pattern of inattention and/or hyperactivity-impulsivity interfering with functioning	1 - 2
	Autism Spectrum Disorder (ASD)	Developmental disorder characterized by challenges with social interaction, communication, and repetitive behaviors	0.2 - 0.5
Neurocognitive Disorders	Dementia (including Alzheimer's Disease)	Decline in cognitive function, affecting memory, thinking, and social abilities	1.5 - 2
Substance-Related Disorders	Substance Use Disorders	Patterns of symptoms resulting from the use of a substance despite experiencing problems due to its use	2.6 - 3.3
Somatic Symptom and Related Disorders	Somatic Symptom Disorder	Excessive focus on physical symptoms such as pain or fatigue, leading to significant distress and impairment	0.1 - 0.3
	Illness Anxiety Disorder (Hypochondriasis)	Preoccupation with having or acquiring a serious illness despite mild or no symptoms	0 - 0.1
Dissociative Disorders	Dissociative Identity Disorder (DID)	Presence of two or more distinct personality states or identities	0 - 0.1
	Dissociative Amnesia	Inability to recall important personal information, often following trauma or stress	0.1 - 0.3
Other Disorders	Sleep-Wake Disorders	Problems with sleep patterns, such as insomnia, sleep apnea, and narcolepsy	5 - 10
	Impulse Control Disorders	Difficulty controlling impulses, leading to behaviors such as kleptomania (stealing), pyromania (fire-setting),	1 - 2

		and intermittent explosive disorder (anger outbursts)	
	Adjustment Disorders	Emotional or behavioral symptoms in response to a significant life change or stressor	1 - 3

Market overview

1. **Lack of help:** We have just 43 state-run mental health institutions across the country. 3800 psychiatrists available as against the requirement of 11,500; 898 clinical psychologists as against 17250, 850 psychiatric social workers as against 23000, 1500 psychiatric nurses as against 3000. That means there is only one psychiatrist for four lakh Indians and only 1,022 college seats for mental health professionals are set aside in India.

The study from "**Pure and Applied Biology**" (December 2021) identifies several reasons why people do not accept and share mental health issues:

1. **Stigma and Social Isolation:** People suffering from mental illnesses face significant social stigma, isolation, and identity-related stigmas, which discourage them from seeking help or sharing their issues.
2. **Lack of Awareness:** There is a widespread lack of awareness about mental health issues, leading to social problems and discrimination.
3. **Statistics on Mental Health:**
 - The World Health Organization estimates that 10% of the global population suffers from mental health issues, with 1% experiencing severe mental illness.
 - Studies show that one in every 33 people has a mental disability.
4. **Impact on Daily Life:** Individuals with mental disabilities often struggle with daily routines, education, and social interactions, further compounding their reluctance to disclose their conditions.
5. **Role of Community and Family:** Effective treatment often requires support from family, friends, and the community, which is frequently lacking due to prevailing negative attitudes and misunderstandings about mental health.

This combination of social stigma, lack of awareness, and insufficient support systems creates significant barriers to openly addressing mental health issues.

Govt Initiatives (or lack thereof) in Mental Health:

1. India has the highest rate of suicides in the world
2. Only Rs. 990 crores allotted to Mental Health (Budget 2023)
3. Relatively slow expansion of the DMHP (District Mental Health Programme) and thereby the NMHP (National Mental Health Programme)
4. The government only funds NIMHANS (National Institute of Mental Health and Neuro-Sciences, Bangalore) & LGBRIMH (Lokpriya Gopinath Bordoloi Regional Institute of Mental Health, Tezpur)
5. Costly mental healthcare:
Insurance covers only IPD admissions and not OPD appointments related to mental health (only 2-3 insurance products are there in retail and group insurance products have mental health benefits depending upon the organization)
6. Counseling sessions are not covered/ reimbursed by insurance
7. Health and Life insurance claims are denied for suicide attempts
8. An average session of 30-60 mins can cost up to Rs. 500-5000
9. Mental health services do not reach beyond Tier 1 & Tier 2
10. Issues with data Privacy of medical records in India
11. Mental health organizations are taxed 18% GST & 10% TDS on mental health services of all kinds
12. The government has Ayushman Bharat as a Universal Healthcare initiative but Mental Health is not covered
13. We have just 43 state-run mental health institutions across the country.
14. 3800 psychiatrists available as against the requirement of 11,500; 898 clinical psychologists as against 17250, 850 psychiatric social workers as against 23000, 1500 psychiatric nurses as against 3000.
15. There is only **one psychiatrist for four lakh Indians** and only 1,022 college seats for mental health professionals are set aside in India.

Competitor Analysis

Indian Meditation Market:

- The Meditation Apps market in India is expected to witness significant growth in the coming years.
- According to projections, the revenue in this market is set to reach US\$67.53m by 2024.
- Furthermore, it is anticipated that there will be a steady annual growth rate of 13.38% from 2024 to 2028, resulting in a projected market volume of US\$111.60m by the end of 2028.
- In terms of user penetration, it is estimated that 0.14% of the Indian population will be using the Meditation Apps market in 2024.
- The average revenue per user (ARPU) is projected to be US\$74.12.
- India's growing interest in digital health has led to a surge in the popularity of meditation apps among its tech-savvy population.
- Penetration of Free and Paid meditation apps in India.

Competitors:

Mode	App/Programs	USP	Cons	Users	Cost
Offline	Art of living	Highly rated by users	> Expensive > Needs physical presence	10M	Starts at Rs.4000/p erson
	Mind.Fit	Well recognized because of cult.fit	> Expensive > Needs physical presence	20K	Rs. 12,550 for 3 months
	Inner Engineering - Sadhguru	> Sadhguru's draw > Reduced stress by over 50%.	> 4-7 day program, 2 hours in select centers	2M	\$500 per program
Online	Wysa	> AI guided cognitive behavioral therapy (CBT)	> Everything is Text-based	5.3K	3749/year
	Amaha (Inner Hour)	> Personalized Plans > in-house therapists > Option to choose therapist	> Therapist Plans are Costly	200+ experts 100k users	Rs 600 per session
	Happify	>Personalized activities and games >Character strength report	> No free trial > Games don't directly target mental health	20M	\$139.99 annually

			> Educational “Tracks” lack structure		
	Evolve	> 100+ sleep audios, meditations > Music 50+ CBT > Addresses issues like loneliness and income uncertainty. > LGBTQ+ Context	> Costly > Limited free content	100K	Rs. 8388 annually
	Calm	>For beginner practitioners	> Lacks clear structure > Not for advanced practitioners > Age restrictions Expensive.	100K	Rs. 8388 annually
	Headspace	> Offers Podcasts > structured meditation	> Forces sign up for a paid plan	100M	Free for 14 days then 1499/yr
	SuperBetter	> Squad Play > Game Scores > Reflection	> No guidance > No Content	1M	\$24.99/year
	Endel	>Scientifically backed >Music therapy >Deeply personalized	> Expensive > Music can seem repetitive over time	1M	\$50year and \$90 for a lifetime subscription

User survey

- The Data shows 46.8% people are moderately informed for mental health issues and resources

- The data shows people often get stressed or anxious 34% weekly and 21.3% daily

- The Data shows 80.9% couldn't seek professional help when suffering from mental health issues like stress, depression, anxiety, etc.

- The data shows 57.4% have adequate support to deal with mental health issues but couldn't trust professional help

- Methods used to cope with Mental health problems

- The data shows 72.3% people are interested in taking part in mental well-being activities

Link to User Survey Questionnaire: [Mental Health Matters; You Matter. \(Responses\)](#)

Insights from User Survey:

- **Moderate Awareness:** Approximately 46.8% of people have moderate awareness of mental health issues and available resources.
- **Stress and Anxiety:** A significant portion of the population (34% weekly and 21.3% daily) experiences stress and anxiety.
- **Barriers to Professional Help:** Sadly, 80.9% of individuals couldn't seek professional help when facing mental health challenges.
- **Trust Issues:** While 57.4% have support, they struggle to trust professional assistance.
- **Interest in Well-Being Activities:** Encouragingly, 72.3% express interest in participating in mental well-being activities.
- **Coping Strategies:** Common coping methods include listening to music (51.1%), outdoor activities (42.6%), exercise (31.9%), talking to someone (59.6%), and meditation (21.3%).

User Interviews

Insights from Interviews with Different Personas

- **Stress and Emotional Distress:**
Many individuals are dealing with significant stress and emotional distress due to various life events such as financial issues, relationship breakups, and heavy workloads. These stressors can lead to unhealthy coping mechanisms such as smoking and overeating.

- **Depression and Anxiety:**

Depression and anxiety are common, with symptoms including frequent crying, lack of motivation, sleeplessness, and fear of panic attacks. Some individuals have been dealing with these conditions for an extended period.

- **Coping Mechanisms:**

Various coping mechanisms are being used, ranging from unhealthy habits like smoking and overeating to healthier practices like yoga, breathing exercises, and meditation. However, these are often self-initiated and may not be enough to fully manage the mental health conditions.

- **Seeking Help:**

There's a noticeable hesitation or lack of trust in seeking professional help. Some individuals believe that therapists are only interested in making money, while others have sought help but found it ineffective.

- **Self-Care and Recovery:**

Despite the challenges, there's a strong emphasis on self-care and recovery. Individuals are actively taking care of their health, mind, and body, and some have seen improvements in their conditions.

Insights from Market Research

1. **Shortage of Mental Health Professionals:** India has a severe shortage of mental health professionals with only 43 state-run mental health institutions, 3800 psychiatrists, 898 clinical psychologists, 850 psychiatric social workers, and 1500 psychiatric nurses. This is far less than the required numbers.
2. **Stigma and Social Isolation:** People suffering from mental illnesses face significant social stigma, isolation, and identity-related stigmas, discouraging them from seeking help or sharing their issues.
3. **Lack of Awareness:** There is a widespread lack of awareness about mental health issues, leading to social problems and discrimination.
4. **High Suicide Rate:** India has the highest rate of suicides in the world, indicating a critical mental health crisis.

5. **Inadequate Funding:** The government has allocated only Rs. 990 crores to Mental Health in the Budget 2023, which is insufficient considering the scale of the problem.
6. **Costly Mental Healthcare:** Mental healthcare is expensive in India, with an average session of 30-60 mins costing up to Rs. 500-5000. Insurance often does not cover these costs.
7. **Limited Reach of Services:** Mental health services do not reach beyond Tier 1 & Tier 2 cities, leaving a large population without access to these services.
8. **Data Privacy Concerns:** There are issues with data privacy of medical records in India, which can deter people from seeking help.
9. **Taxation on Mental Health Services:** Mental health organizations are taxed 18% GST & 10% TDS on mental health services of all kinds, adding to the cost of these services.
10. **Growth of Meditation Apps:** The Meditation Apps market in India is expected to witness significant growth, with the revenue set to reach US\$67.53m by 2024. This indicates a growing interest in digital health solutions among the Indian population.

Problems Highlighted:

- **Acceptance**
 - Problem: Many individuals struggle with accepting mental health issues.
 - Reasons: Stigma, Denial, Fear of Judgment
- **Sharing**
 - Problem: Sharing mental health struggles with others can be extremely challenging.
 - Reasons: Fear of Rejection, Vulnerability, Mistrust
- **Access to Resources**
 - Problem: Difficulty accessing mental health resources and services.
 - Reasons: Financial Barriers, Geographical Barriers, Lack of Awareness.
- **Self-Stigma**
 - Problem: Internalized negative beliefs about one's own mental health issues.
 - Reason: Low Self-Esteem, Self-Blame, Perfectionism.
- **Social Isolation**
 - Problem: Feeling isolated from others due to mental health issues.
 - Reason: Withdrawal, Lack of Understanding, Fear of Burdening Others

- **Treatment Adherence**

- Problem: Difficulty adhering to treatment plans.
- Reason: Side Effects, Lack of Immediate Results, Complexity of Treatment.

- **Emotional Regulation**

- Problem: Difficulty managing and regulating emotions.
- Reason: Lack of Coping Skills, Intense Emotions, Trauma.

Understanding these problems is crucial for fostering a supportive environment where individuals feel safe to accept and share their mental health issues. Creating awareness, reducing stigma, and encouraging open conversations about mental health can help mitigate these challenges

High Level Solution

Overview

The mental health game provides a comprehensive platform for improving mental well-being through personalized tasks, community support, and educational content, leveraging interactive activities and real-time feedback.

Core Components

1. **Personalized Onboarding:**
 - **Sign-Up Process:** Streamlined profile creation and mental health questionnaire.
 - **Customization:** Personalized theme, avatar, and AI pet based on user preferences.
2. **Interactive Tasks and Activities:**
 - **Meditation:** Guided sessions and breathing exercises.
 - **Storytelling:** Emotional stories with reflective questions.
 - **Interactive Challenges:** Puzzles and cognitive games tailored to user preferences.
 - **Wisdom:** Educational videos on mental health topics.
 - **Community Engagement:** Forums for sharing experiences and support.

3. **Progressive Level System:**
 - **Task Completion:** Earn XP to progress through levels.
 - **Level Unlocks:** New tasks and features with each level.
 - **Balanced Difficulty:** Increasing task complexity to maintain engagement.
4. **Real-Time Feedback:**
 - **Constructive Feedback:** Tips and guidance for improvement.
 - **Suggestive Feedback:** Suggestions for enhancing practices.
 - **Appreciative Feedback:** Recognition and rewards for achievements.
5. **Resting Points with Music Therapy:**
 - **Regular Breaks:** Encouraging periodic rests.
 - **Calming Music:** Therapeutic music and visuals for relaxation.
6. **Data Privacy and Security:**
 - **Anonymity Measures:** Protecting user interactions.
 - **Data Encryption:** Ensuring data security.
 - **Compliance:** Adhering to data privacy laws.

Key Features

- **AI-Driven Personalization:** Customized user experience based on assessment.
- **Dynamic Task Allocation:** Adapting tasks based on user progress.
- **Community Support:** Safe, anonymous space for connection and support.
- **In-Game Rewards:** Badges, points, and unlockable content.
- **Comprehensive Feedback:** Continuous, real-time feedback for engagement.

Solution Prioritization

High Priority	Medium Priority	Low Priority
➤ Meditation/Breathing exercises ➤ Interactive challenges ➤ Story Telling by NPC ➤ Wisdom(Educational content) by NPC ➤ Community ➤ AI voice based chatbot by NPC	➤ Personalization of NPCs ➤ Monetization ➤ Mental health expert recommendation	➤ Introduction of more themes ➤ Introduction of more NPCs ➤ More Game Modules

Detailed Solution

This game targets individuals seeking mental health support through engaging and therapeutic digital interactions. The game will include features such as personalized tasks, community forums, NPC interactions, and progression tracking.

Objectives:

- Provide personalized mental health support.
- Engage users through interactive and educational content.
- Foster a supportive community.
- Ensure user data privacy and anonymity.

Onboarding Process:

Sign-Up/Sign-In

- **Welcome Screen:** Users are greeted with a welcoming message and given the option to Sign In or Sign Up.
- **Sign-Up Screen:** New users enter basic information (username, email, password). Returning users enter their credentials on the Sign-In screen.
- **Profile Setup:** After signing up, users proceed to set up their profile, including selecting an avatar and filling out a detailed questionnaire.

Tutorial

- **Introduction:** A brief tutorial introduces the game's purpose, key features, and navigation tips.
- **Guided Walkthrough:** Users are guided through the initial steps of the game, including how to access core elements (Meditation, Storytelling, Interactive Challenges, Wisdom, Community).

Mental Health Questionnaire

Purpose:

- To assess the user's mental health state and personalize their gaming experience.

Sections and Sample Questions:

1. **Mood and Emotional State**
 - "How often have you felt down, depressed, or hopeless in the past two weeks?"
 - "How frequently do you experience feelings of anxiety or worry?"
2. **Sleep Patterns**

- “How many hours do you sleep on average per night?”
 - “Do you have trouble falling or staying asleep?”
- 3. **Stress Levels**
 - “How often do you feel overwhelmed by stress?”
 - “What are your primary sources of stress?”
- 4. **Social Interactions**
 - “How often do you engage in social activities?”
 - “Do you feel supported by your friends and family?”
- 5. **Interests and Preferences**
 - “Which activities do you enjoy the most: puzzles, storytelling, meditation?”
 - “What type of virtual environment do you find most relaxing (e.g., village, forest, island)?”
- 6. **Current Mental Health Practices**
 - “Do you currently practice any form of meditation or mindfulness?”
 - “Have you participated in any mental health therapy or counseling?”

System Settings

Theme Selection

- **Default Theme:** Based on questionnaire responses, the game selects a default theme (e.g., village, forest, island) that aligns with the user’s preferences and needs.
- **Customization:** Users can change the theme at any time in the settings menu.

Avatar Customization

- **Initial Setup:** Users choose their avatar during profile setup.
- **Customization Options:** Options for hair, clothing, accessories, and more. Avatars can be updated anytime.

Pet Selection and Customization

- **Initial Setup:** Users select a pet based on the chosen theme (e.g., a dog for a village, a parrot for an island).
- **Pet Characteristics:** The pet serves as a companion and AI assistant, offering support and interaction.
- **Voice and Interaction:** The pet has a friendly tone and provides audio responses (e.g., "woof" for a dog). Users can interact with the pet by clicking on it, which triggers animations and voice responses

Level Progression

Purpose

Level progression ensures a structured and engaging user experience by gradually introducing core elements, maintaining a balance between challenge and support, and motivating users through rewards and achievements.

Core Elements

1. **Meditation**
2. **Storytelling**
3. **Interactive Challenges**
4. **Wisdom**
5. **Community**

Initial Setup and Personalization

- **Sign-Up and Questionnaire:** Upon sign-up, users fill out a questionnaire assessing their mental health state, preferences, and interests. This information personalizes their initial tasks and game settings.

Level Structure

Each level consists

- **Tasks from Core Elements:** A balanced mix of tasks from each core element, tailored to the user's mental health state.
- **Progressive Difficulty:** Tasks become gradually more challenging as users advance to higher levels.
- **Resting Points:** Regular breaks with music therapy and relaxation exercises.

Level Overview

1. **Level 1: Introduction**
 - **Tasks:** Basic meditation, introductory storytelling, simple interactive challenges (e.g., puzzles), initial wisdom videos, and community introduction.
 - **Rewards:** Basic badges and points for task completion.
 - **Unlocks:** Access to community forums and initial customization options.
 - **Threshold:** From 1 Minute to 5 minutes (Each task)
2. **Level 2: Building Foundations**

- **Tasks:** Intermediate meditation exercises, deeper storytelling with reflective questions, moderately challenging puzzles, additional wisdom content.
- **Rewards:** Enhanced badges, points, and new customization options.
- **Unlocks:** Advanced customization for avatars and pets, more complex challenges.
- **Threshold:** From 5 Minute to 15 minutes (Each task)

3. Level 3: Skill Development

- **Tasks:** Advanced meditation techniques, emotionally engaging stories, challenging interactive games (e.g., advanced puzzles, Sudoku), wisdom videos on specific mental health topics.
- **Rewards:** Special badges, more points, and exclusive customization items.
- **Unlocks:** New story arcs, higher-level community interactions.
- **Threshold:** From 15 Minute to 45 minutes (Each task)

4. Level 4: Mastery and Community Engagement

- **Tasks:** Expert-level meditation sessions, intricate storytelling with decision-making elements, complex interactive challenges, in-depth educational content.
- **Rewards:** Mastery badges, high points, and premium customization options.
- **Unlocks:** Leadership roles in community forums, ability to create and share user-generated content.
- **Threshold:** 45 min plus challenges and sub tasks

Task Details and Rewards

1. Meditation

Task Details:

- **Guided Meditations:** Users follow a guided meditation session with a set duration.
- **Breathing Exercises:** Simple timed breathing exercises with visual and audio cues.
- **Chanting:** Users hum or chant for a specified period to grow virtual plants/gain XP points.

Rewards:

- **XP Points:** Awarded based on the duration and completion of meditation exercises.
- **Plant Growth:** Virtual plants grow in the user's nursery, visually representing their progress.
- **Badges:** Achievements for completing a series of meditation sessions (e.g., "Meditation Beginner," "Mindful Master").

2. Storytelling

Task Details:

- **Listening to Stories:** Users listen to an NPC (old woman) narrate stories related to mental health.
- **Reflective Questions:** After the story, users answer questions that encourage reflection on their own experiences.

Rewards:

- **XP Points:** Earned for listening to stories and answering reflective questions.
- **Story Completion Badges:** Awarded for completing a certain number of stories (e.g., "Story Listener," "Narrative Explorer").
- **Unlockable Content:** New stories and themes are unlocked based on progress.

3. Interactive Challenges

Task Details:

- **Puzzles:** Users solve puzzles that are progressively more challenging.
- **Coloring Activities:** Digital coloring tasks designed to relax and engage.
- **Sudoku and Other Games:** Mental health-themed games like Sudoku that promote cognitive engagement.

The users can use 'Hint' section to get hints to complete the challenges

Rewards:

- **XP Points:** Based on the difficulty and completion time of challenges.
- **Challenge Badges:** Earned for completing a set number of challenges (e.g., "Puzzle Pro," "Coloring Champion").
- **Special Items:** Unique avatar or pet customization items unlocked upon completion of difficult challenges.

4. Wisdom (Educational Content)

Task Details:

- **Watching Videos:** Users watch short educational videos presented by the NPC (monk) on mental health topics.
- **Interactive Quizzes:** Quizzes following the videos to reinforce learning.

Rewards:

- **XP Points:** Earned for watching videos and completing quizzes.

- **Knowledge Badges:** Awarded for completing educational modules (e.g., "Wisdom Seeker," "Mental Health Scholar").
- **Access to Advanced Content:** Unlock advanced educational videos and resources.

5. Community

Task Details:

- **Posting Thoughts:** Users post their thoughts or experiences in community forums.
- **Engaging with Others:** Commenting, upvoting, and connecting with other users’ posts.
- **Participating in Group Activities:** Joining community challenges or support group discussions.

Rewards:

- **Community Points:** Earned for active participation in community activities.
- **Community Badges:** Achievements for milestones in community engagement (e.g., "Active Member," "Community Leader").
- **Recognition:** Highlighted posts or contributions in the community.

Progression and Unlocks

- **Task Completion:** Users earn XP and rewards by completing tasks. Higher XP unlocks new levels.
- **Incremental Unlocks:** Locked sections indicate the level required to access them, motivating users to progress.
- **Reward System:** Regular feedback and recognition through badges, points, and new customization options keep users motivated.

XP Table

XP's required to unlock new levels -

Level	XP required to access level
Level 1	0
Level 2	500
Level 3	1500
Level 4	3000
Level 5	5000
Level 6	8000

XPs earned at every new sublevel -

Task	XP Earned
Signup and Daily Login	50
Each Task (Meditation, Stories, Challenges, etc) earned in Level 1	100
Each Task (Meditation, Stories, Challenges, etc) earned in Level 2	150
Each Task (Meditation, Stories, Challenges, etc) earned in Level 3	200
Each Task (Meditation, Stories, Challenges, etc) earned in Level 4	250
Every badge earned in the community	50
XP earned during the unlock of the new level	200

Progression Scenario Example

1. **Starting Point:** User signs up, completes the questionnaire, and begins Level 1 with personalized meditation, storytelling, and simple challenges.
2. **Level 1 Completion:** User completes tasks, earns XP, and unlocks Level 2.
3. **Level 2:** User faces more challenging tasks, engages more deeply with the community, and earns more points and badges.
4. **Continuous Progress:** User advances through levels, unlocking new content, customization options, and community features.

Demo Task

Beginner Level

- Tasks start with short-duration activities, such as 1 to 5-minute guided meditation sessions, puzzles, storytelling, and educational videos.
- Users gradually increase the duration of each activity from 1 minute to 5 minutes.
- Rewards for completing tasks include XP points and badges like "Beginner Meditator," "Puzzle Novice," "Story Listener," and "Wisdom Seeker."
- Unlocks include access to community forums and basic customization options for avatars and pets.
- Progression to the next level is achieved by completing 5-minute tasks for all activities.

Advanced Level

- Task duration increases to 6 to 15 minutes per activity, including longer guided meditation sessions, more complex puzzles, extended storytelling, and in-depth educational videos.
- Users engage in progressively longer tasks, building on the foundation set in the beginner level.
- Rewards include higher XP points and badges such as "Intermediate Meditator," "Puzzle Solver," "Story Enthusiast," and "Wisdom Adept."
- Additional unlocks include advanced customization options, new story arcs, and higher-level community interactions.
- Progression to subsequent levels requires completing all 15-minute tasks for each activity

Non Playing Characters

Each NPC is integrated seamlessly into the game's environment and is easily accessible from the main dashboard. They appear in designated areas that match the game's theme

1. Pet (AI Assistant)

Role: Acts as a companion, providing emotional support and assistance. Functions as an AI voice assistant to help users navigate the game and manage their mental health tasks.

Characteristics:

- **Tone:** Friendly, supportive, and comforting.
- **Interaction Method:** Users interact with the pet by clicking on it. The pet responds with both visual (animation) and auditory cues (e.g., "woof" for a dog). User gets personalized responses based on the actions and mental health state.
- **Dressing/Appearance:** The pet's appearance varies based on the theme selected by the user

Access: The pet (icon) is always accessible from the main dashboard.

2. Old Woman (Storyteller)

Role: Provides emotional storytelling, sharing relatable stories that align with the user's mental health state. Engages users through narrative therapy, helping them feel understood and less isolated.

Characteristics:

- **Tone:** Wise, gentle, and empathetic.
- **Interaction Method:** Users listen to her stories and can interact through situational questions
- **Responses:** She asks reflective questions and allows user to answer based on options displayed on the screen. and offers insights that prompt users to think about their own experiences and emotions.

- **Dressing/Appearance:** Traditional attire that fits the game's themes

Access: Accessible from the storytelling section of the game. Users can visit her at a designated storytelling spot in their virtual environment, where they can choose to listen to different stories based on their current mental health focus.

3. Monk (Educator)

Role: Provides educational content and wisdom through short videos and interactive sessions. Helps users understand various mental health topics and coping strategies.

Characteristics:

- **Tone:** Calm, knowledgeable, and serene.
 - **Interaction Method:** Users watch videos and get clarifications on mental health topics.
 - **Responses:** Offers explanations and practical advice on managing mental health.
- Dressing/Appearance:** Wears traditional monk robes, often found in a peaceful and meditative posture.

Access: Accessible from the wisdom or educational section of the game.

Resting Points

Resting points provide necessary breaks during gameplay, using music therapy and relaxation techniques to promote mental well-being and prevent fatigue. These features include automatic rest prompts, which are suggested after 45 minutes of continuous play through gentle notifications, and music therapy, which plays calming music such as classical, ambient, or nature sounds, allowing users to select their preferred type.

Additionally, interactive relaxation options, like calming animations or nature scenes and simple guided breathing exercises, enhance the experience. When Rest Mode activates, the game pauses and transitions to soothing visuals and music. Music therapy sessions last 5-10 minutes with options to extend, and users can customize rest frequency and duration, as well as their preferred therapeutic music and activities.

Example

1. **Notification Prompt:** Suggests a break after 45 minutes.
2. **Entering Rest Mode:** Transitions to a peaceful scene with ambient sounds.
3. **Music Therapy Session:** Plays calming music with guided breathing exercises.
4. **Resuming Gameplay:** Ends with a gentle reminder to continue the journey.

Feedback Mechanism

Feedback collection from user

Purpose: To gather user insights for continuous improvement and ensure the game meets user needs effectively.

Types of Feedback

- **In-Game Prompts:** Quick questions after key activities.
- **Periodic Surveys:** Monthly detailed surveys for comprehensive feedback.
- **Post-Task Reviews:** Immediate feedback after completing tasks or levels.

Feedback Elements: User experience, Task difficulty, Feature suggestions, Emotional impact

Collection Methods:

- **Pop-Up Prompts:** Brief ratings or comments after activities.
- **Dedicated Feedback Section:** Always accessible for users to submit feedback.
- **Anonymous Surveys:** To encourage honest responses.

Frequency: Feedback is collected initially after the first level to gather early impressions, periodically (such as monthly) to track user experience over time, and ad-hoc anytime through the dedicated feedback section

Feedback given to user

1. **Real-Time Pop-Ups:**
 - **Description:** Short messages that appear immediately after completing a task or reaching a milestone.
 - **Timing:** Instantaneous feedback to reinforce positive behavior and provide immediate guidance.
 - **Visuals:** Include encouraging icons or animations (e.g., thumbs up, confetti).
2. **Progress Summaries:**
 - **Description:** Summarize user progress at the end of each session or level, highlighting achievements and areas for improvement.
 - **Timing:** At the end of a session or upon level completion.
 - **Content:** Includes XP earned, badges achieved, and suggestions for the next session.
3. **Daily/Weekly Reports:**
 - **Description:** Detailed reports sent to users summarizing their activities, progress, and personalized suggestions.
 - **Timing:** Sent daily or weekly based on user preference.
 - **Content:** Highlights achievements, provides constructive feedback, and suggests new tasks or activities.

Examples of In-Game Feedback

1. After Completing a Meditation Task:

- **Pop-Up:** “Excellent meditation session! Your focus is improving. Try extending your session by a few minutes next time.”
- **Progress Summary:** “You’ve completed 5 meditation sessions this week! Keep it up to unlock new meditation techniques.”

2. After Solving a Puzzle:

- **Pop-Up:** “Great job solving that puzzle! Your problem-solving skills are getting sharper.”
- **Progress Summary:** “You’ve solved 10 puzzles! Consider trying a new challenge to test your skills further.”

3. After Participating in Community Forums:

- **Pop-Up:** “Thank you for sharing your thoughts in the community! Your contributions are valuable.”
- **Progress Summary:** “You’ve been active in 3 community discussions this week. Keep engaging to earn more community points.”

Benefits

Motivation and Engagement:

- Continuous feedback keeps users motivated and engaged, encouraging them to return to the game regularly.

Skill Development:

- Constructive and suggestive feedback helps users improve their skills and mental health practices over time.

Positive Reinforcement:

- Appreciative feedback boosts user confidence and provides a sense of accomplishment.

Personalized Experience:

- Feedback tailored to individual user actions and progress enhances the personalization of the game experience.

Metrics

Northstar Metric: **Daily active Task completion**

Number of Trees grown

Core Element	Metric
--------------	--------

Meditation	• Average Session Duration • % of sessions completed compared to sessions started (completion rate) • Average number of times users engage in guided meditations, breathing exercises, or chanting (frequency)
Storytelling	• % of total users who have completed the story at least once • % of total users who have repeated/revisited the story • % of total users who have started the story but not completed or drop off rates
Interactive Challenges	• % of users completing challenges • % of dropping off from challenges after starting the challenge • Hint usage rate • Average Session Duration
Wisdom	• % of total users who have completed the video • Average time taken by users to complete the quiz • Quizzes scores • No of badges earned by user
Community	• Total number of posts by users • Average Session Duration • Engagement per post: Number of likes, shares, comments per post • Number of Posts created per user • % of users with at least one interaction • Time to first Feed engagement: Time taken by the user to first engage with the community from sign's up. • Monthly Feed retention rate • Engagement rate per XP user
Engagement and Retention Metrics	• Daily Active Users • Monthly Active Users • Average Session Length • Average No. of sessions per user • Retention Rate • Stickiness Rate
