OBJECTIVE -

To redefine the grocery shopping experience in India by integrating innovative, user-centered features into the Zepto app.

This FRD focuses on implementing voice commands for item addition, seamless grocery list uploads, and shareable cart links to cater to the needs of urban Indian millennials.

By focusing on convenience, personalization, and efficiency, these features aim to increase user engagement and satisfaction. Key performance indicators (KPIs) for success include adoption rate, feature utilization, and increased purchase conversion rates, supporting Zepto's goal of leading the quick commerce market in India.

INTRODUCTION -

The Zepto Enhanced Grocery Shopping Experience is designed to bridge the gap between traditional grocery shopping and the convenience of digital solutions. This initiative addresses

the lack of personalization and ease in digital grocery apps, providing users with intuitive features such as voice commands, grocery list uploads, and shareable cart links. By implementing these advancements, Zepto aims to deliver a seamless and user-centered experience that stands out in India's competitive grocery market.

Zepto's unique selling proposition (USP) lies in its holistic approach: rather than offering isolated features, Zepto combines voice interaction, automated list management, and one-click sharing for enhanced convenience and engagement. Unlike other platforms, Zepto allows users to effortlessly add, modify, and share their shopping lists, saving valuable time and effort. Drawing from insights in our competitive analysis, Zepto differentiates itself by offering a superior, personalized experience tailored to the fast-paced lifestyles of urban Indian millennials.

This document outlines the strategic steps for integrating these features, emphasizing Zepto's commitment to creating an efficient, user-focused grocery shopping experience.

PROBLEM STATEMENT -

What is the true problem?

The true problem lies in the lack of a cohesive, engaging grocery shopping experience that effectively combines the familiarity of traditional shopping with the convenience of digital platforms. Digital grocery apps, while convenient, often fall short in providing personalized and interactive features that enhance user engagement and satisfaction. This results in a fragmented shopping experience that lacks the personalized touch, leading to lower user retention and limited differentiation in the market.

Who is facing this problem?

The primary users impacted are urban Indian millennials, ages 18-34, who are accustomed to digital convenience yet seek a more engaging and personalized shopping experience. This demographic includes busy professionals, young families, and tech-savvy individuals who value efficiency but are disappointed by the lack of user-friendly, personalized features in existing grocery apps.

How do we know it's a real problem?

Surveys and market analysis reveal that Indian millennials prioritize convenience but often feel digital grocery apps are too transactional and lack interactivity. The success of competitors like Blinkit and Swiggy Instamart, with limited personalization features, indicates demand but also an opportunity for differentiation. Additionally, global trends in digital personalization and user-

centered design highlight the need for innovative solutions that blend convenience with a personal touch.

Why should we solve this problem now?

The rapid growth of the quick commerce market, projected to reach \$6 billion in India by 2025, presents a timely opportunity. Addressing this gap with personalized and interactive features could position Zepto as a market leader. With increasing smartphone penetration and a consumer shift towards online shopping, now is the optimal time to capture market share through enhanced user engagement and differentiation.

What is the value generated by solving this problem?

- **For Target Users:** Users will benefit from a more engaging and efficient grocery shopping experience through features like voice commands for hands-free item addition, easy grocery list uploads, and shareable cart links for convenience. These features save time, simplify shopping, and offer a more interactive experience tailored to their preferences.
- **For Zepto:** By enhancing user satisfaction and engagement, Zepto can increase brand loyalty, improve customer retention, and open new revenue streams through premium, personalized features. This solution also strengthens Zepto's market position as a pioneer in digital grocery shopping, distinguishing it from competitors through an all-in-one, user-focused platform.

HIGH-LEVEL SOLUTION -

The proposed solution is to enhance the Zepto app by integrating advanced, user-focused features that redefine the grocery shopping experience. This includes incorporating **multilingual voice commands** for easy item addition, **grocery list uploads** for quick and efficient cart building, and **shareable cart links** to allow seamless collaboration and recommendations. This approach not only brings digital convenience to the forefront but also creates a personalized, engaging shopping experience, setting Zepto apart in the competitive grocery app market.

Unique Selling Proposition: Unlike traditional grocery apps that offer limited functionality, Zepto's all-in-one platform combines convenience with personalization. This unique blend empowers users to shop efficiently and collaboratively, making Zepto the go-to choice for busy urban millennials seeking a hassle-free shopping solution.

User-Centric Focus: These features are designed to directly address key user pain points: time constraints, ease of adding items, and convenience in sharing shopping lists. Voice commands provide a hands-free shopping experience, ideal for users on the go, while grocery list uploads save time by automating cart population. Shareable cart links enable users to receive and share personalized shopping lists, simplifying group orders and influencer recommendations.

Potential Impact: By implementing these features, Zepto anticipates a substantial increase in user engagement and retention. Studies suggest that apps offering personalized and convenient features see up to a **30% increase in customer satisfaction** and **20% higher conversion rates**.

MARKET ANALYSIS -

Target Market: The primary audience for Zepto's enhanced grocery shopping features consists of urban Indian millennials (ages 18-34), a group highly engaged with digital technology and driven by a need for convenience and efficiency. Research indicates that over 70% of urban millennials prefer digital solutions for daily tasks, making them receptive to features like voice commands, grocery list uploads, and shareable carts. This demographic shift towards digital convenience aligns well with Zepto's proposed feature set, which aims to meet their demand for innovative and efficient shopping solutions.

Market Potential: The Indian grocery market is on a significant growth trajectory, especially within the quick commerce sector, projected to reach \$6 billion by 2025. This growth is spurred by factors such as increased smartphone penetration, a strong shift towards online shopping, and evolving consumer preferences for speed and convenience. With smartphone users in India expected to exceed 1 billion by 2026, the demand for advanced digital shopping experiences is likely to rise, positioning apps like Zepto to capitalize on this trend.

Competitive Edge: Zepto differentiates itself from competitors such as Blinkit and Swiggy Instamart by offering an integrated experience that combines multiple advanced features in one app. While competitors emphasize rapid delivery, Zepto's unique selling proposition is its blend of convenience and personalization, providing a more comprehensive digital grocery experience. This approach appeals to users who seek not just speed but also a more tailored shopping experience.

Global Trend Alignment: The proposal aligns with global trends in digital transformation, where convenience and personalization are primary drivers of consumer engagement. Studies reveal that around 80% of consumers are more inclined to engage with brands that offer personalized experiences. This trend further supports the relevance of Zepto's planned features, which aim to enhance user engagement through customization and efficiency.

Economic Backdrop: India's rising disposable incomes and increasing adoption of digital technologies create a favorable environment for introducing advanced grocery shopping features. As more consumers gravitate toward tech-driven solutions, the potential for apps like

Zepto to succeed with enhanced features is bolstered by a supportive economic landscape and a growing market of digital-native users.

COMPETITOR ANALYSIS -

The competitive landscape for digital grocery apps in India includes key players like Blinkit, Swiggy Instamart, BigBasket, and Dunzo. Each competitor has its strengths but also certain limitations, as summarized below:

Aspect	Blinkit	Swiggy Instamart	BigBasket	Dunzo	Zepto
Voice-Based Category Search	✓	✓	✓	✗	✗
Category Add to Cart	✗	✗	✗	✗	✗
Grocery List Upload	✗	✓	✗	✗	✗
Shareable Cart Links	✗	✗	✗	✗	✗
Personal Model or API for above features	API	Personal Model	API	✗	✗

This table highlights Zepto's unique opportunity to innovate in areas competitors haven't fully addressed, such as grocery list uploads and shareable cart links, while also exploring advanced voice features. These functionalities align with current consumer demand for convenience and personalized experiences, providing Zepto with a potential edge in the market.

Unique Selling Proposition (USP)

Curated Shopping Experience: Zepto differentiates itself by offering a curated shopping experience that integrates voice commands, shopping list uploads, and shareable cart links. These features streamline and personalize the grocery shopping process, providing a more efficient and user-friendly experience compared to traditional apps.

Integration with Influencer Content: Zepto stands out by allowing food influencers and chefs to share curated shopping lists. This integration enables users to add ingredients directly to their carts with ease, appealing to users who follow culinary trends and trust influencer

recommendations. This unique approach not only adds value for users but also fosters partnerships with influencers, expanding Zepto's reach. Shareable cart link isn't

Convenience and Flexibility: Zepto prioritizes convenience by enabling users to upload both handwritten and digital shopping lists or add items using voice commands. This flexibility saves users time, reduces friction in the shopping process, and meets diverse user preferences, especially for urban millennials looking for quick, tech-driven solutions.

Seamless User Experience: By combining convenience, personalization, and efficiency, Zepto is setting a new standard in quick commerce. Its user-centric design makes it easy for customers to navigate, build, and share carts, enhancing the overall shopping experience and positioning Zepto as a leader in the market.

USER INTERVIEW -

Question	Response
How do you currently create and share grocery shopping lists with others?	"I usually write a list on paper or use a notes app on my phone. If I need to share it, I either take a photo and send it via WhatsApp or type it out in a message."
What do you think about the idea of sharing a grocery list link that automatically adds ingredients to the cart?	"That sounds convenient, especially if I'm following a recipe or getting recommendations from someone I trust."
How would you feel about uploading a photo of your handwritten grocery list to automatically add items to your cart?	"It could save time, but I'd be worried about the accuracy of recognizing my handwriting or certain items."
If you could speak your grocery list into an app, how would that change your shopping experience?	"It would make it much easier and faster, especially when I'm in a rush or have specific brands in mind. I wouldn't have to type everything out."
Would you find it helpful to have a feature that suggests additional items based on your shopping habits or the list you upload?	"Yes, that could be useful for reminding me of things I might forget or discovering new products, but it depends on how relevant the suggestions are."
How do you usually decide which brands or products to buy when shopping for groceries?	"I often go by what I've used before, recommendations, or discounts available. If it's a new product, I might try it if it looks interesting or if someone suggests it."
How often do you create grocery lists?	"I create grocery lists about once a week, usually before my main shopping trip."

How long does it typically take you to create a grocery list?	"It usually takes me around 10-15 minutes to create a grocery list, depending on how much I need to buy."
Are you aware of any other grocery apps that allow you to share shopping lists?	"Yes, I've seen a few apps that allow list sharing, but they don't automatically add items to the cart."
What do you like or dislike about features in other grocery apps?	"I like that some apps have a good selection and fast delivery, but I dislike that list sharing features are limited and not very convenient."
What are the most frustrating aspects of grocery shopping for you?	"The most frustrating part is forgetting items and having to go back, or trying to remember everything when I don't have a list handy."
Are there any features you wish your current grocery app had?	"I wish it had an option to suggest items I might need based on past purchases or a way to easily share my list with family."

USER STORY -

User Story	Amit, a 60-year-old retiree, finds it challenging to type out grocery lists due to limited time and a preference for convenience. He prefers to speak out his grocery list and have the items added directly to his cart without any hassle.
User Persona	Amit, 60 years old, Bangalore, Retired Professional
User's Needs and Goals	- Speak out grocery items to have them added to the cart automatically.- Minimize time spent on shopping tasks by using voice commands.
Acceptance Criteria	- High accuracy in voice recognition and item addition.- Option to specify brands or categories verbally.- Easy-to-use voice interface that requires minimal interaction.

User Story	Suman, a 35-year-old chef and food influencer, often shares recipes with her followers. She wants to provide them with a Zepto shareable cart link so they can easily add all the required ingredients directly to their carts with one click.
User Persona	Suman, 35 years old, Mumbai, Chef and Food Influencer

User's Needs and Goals	- Share a Zepto cart link with her audience that automatically adds all recipe ingredients to their carts.- Enhance convenience for her followers, driving engagement and satisfaction.
Acceptance Criteria	- Seamless creation and sharing of cart links.- Accurate addition of all ingredients to followers' carts with one click.- Option to customize or modify the shared cart before purchase.

User Story	Priya, a 28-year-old working professional, often makes handwritten grocery lists and prefers not to manually add each item to her online cart. She wants a quick solution to upload her list, whether it's a document or a handwritten note, and have all the items automatically added to her cart.
User Persona	Priya, 28 years old, Delhi, Busy Professional
User's Needs and Goals	- Easily upload a grocery list (document or handwritten) to automatically populate the cart.- Avoid the hassle of manually entering each item, saving time and effort.
Acceptance Criteria	- Accurate and quick processing of both document and handwritten lists into cart items.- User-friendly interface for list uploads.- Ability to review and adjust cart items after upload.

WIREFRAMES -

USER FLOW -

<https://whimsical.com/KyyLpvBjo5Zgjuwhd1RryN>

METRICS -

Adoption Rate of New Features: Track the percentage of users utilizing new features like list upload, voice-based shopping, and shareable cart links, compared to traditional shopping methods. This metric helps evaluate the appeal and initial user interest in these features.

Conversion Rate from Cart to Purchase: Measure the percentage of users who complete a purchase after using the new features. This indicates the effectiveness of the features in driving sales and can be compared to conversion rates of users who don't utilize these features.

Average Order Value (AOV): Assess whether these new features lead to an increase in average order value, particularly through upselling and cross-selling opportunities within the recommendation system. This metric highlights the potential revenue impact of the features.

User Retention and Repeat Usage: Monitor how often users return to use the new features, providing insight into their long-term appeal and stickiness. Higher repeat usage suggests that the features are successfully enhancing the shopping experience.

Time Saved per Transaction: Calculate the time saved by users when using the new features compared to manual shopping. This metric highlights the convenience factor, especially for features like voice commands and list uploads, which aim to streamline the process.

Impact on Customer Loyalty: Evaluate whether the new features improve customer loyalty, as indicated by increased usage of Zepto over time and participation in loyalty programs. Loyalty can also be tracked through metrics like repeat purchase rates and customer retention.

Operational Costs and Scalability: Track the cost of implementing and maintaining these features, alongside scalability as user adoption grows. Monitoring operational efficiency ensures that Zepto can manage increased usage without compromising on performance or user experience.

Customer Satisfaction Metrics: Incorporate customer satisfaction indicators like Net Promoter Score (NPS) and customer satisfaction surveys to gauge users' overall satisfaction with the new features. These metrics provide valuable qualitative feedback and insights into user sentiment.

Benchmarking Against Industry Standards: Compare Zepto's metrics, such as adoption rate, conversion rate, and AOV, to industry benchmarks to assess performance. Benchmarking helps identify areas where Zepto stands out or needs improvement in relation to competitors.

PROJECT PLAN -

Phase 1: Market Research

- **Duration:** 2 months

- **Objective:** To analyze consumer preferences and behavior regarding grocery shopping methods, with a focus on identifying demand for features like list upload, voice-based ordering, and shareable cart links. This phase will involve surveys, focus groups, and competitor analysis.
 - **Resources:** Marketing and research team, budget for surveys and focus groups, competitor analysis tools.
 - **Contingency Plan:** If survey participation is lower than expected, consider additional incentives or expand to online panels to gather sufficient data.
 - **Risk Assessment:** Potential delays due to low survey participation or insufficient data collection. Mitigation strategies include pre-emptive outreach to a diverse demographic and using multiple research platforms.
-

Phase 2: Feature Design and Prototype Development

- **Duration:** 4 months
 - **Objective:** To develop prototypes for each feature (list upload, voice commands, and shareable cart links), focusing on user interface design, backend integration, and initial testing with a small user group.
 - **Resources:** Product designers, UI/UX developers, backend engineers, budget for development tools, and testing environment setup.
 - **Contingency Plan:** In case of technical challenges or delays in feature development, prioritize a phased release of features, focusing on core functionality first.
 - **Risk Assessment:** Potential technical issues in integrating new features. Mitigation strategies include early-stage testing of technical feasibility and ensuring adequate technical support throughout development.
-

Phase 3: Beta Testing and Refinement

- **Duration:** 3 months
- **Objective:** To conduct beta testing in select cities like Mumbai and Bangalore, gathering user feedback to refine features, identify technical issues, and optimize the user experience and operational efficiency.
- **Resources:** Beta testing team, customer support staff, budget for user incentives, data analysis tools.
- **Contingency Plan:** If beta feedback reveals major issues, allocate extra time for adjustments and prioritize critical fixes for launch readiness.
- **Risk Assessment:** User feedback may indicate significant changes are needed, potentially delaying the project timeline. Mitigation includes scheduling feedback sessions early in the

phase to allow time for necessary adjustments.

Phase 4: Full-Scale Rollout

- **Duration:** 6 months
- **Objective:** To implement the refined features across all markets, supported by marketing campaigns and user education initiatives. Continuous monitoring and optimization based on real-time data and user feedback will ensure a smooth launch.
- **Resources:** Marketing team, customer support, data analysts, budget for promotional campaigns, user training resources.
- **Contingency Plan:** In case of technical issues post-launch, have a dedicated support team ready to handle user inquiries, and deploy hotfixes for urgent issues.
- **Risk Assessment:** High demand could strain operational capacity, leading to slower response times. Mitigation includes stress-testing systems before launch and preparing a scalable support structure to handle increased user inquiries.

EDGE CASES -

Order Modifications and Cancellations

- **Scenario:** Users may need to adjust or cancel their grocery orders after submission, particularly if they used upload or voice commands.
- **Solution:** Implement a user-friendly system within the app that allows for easy order modifications and cancellations. The interface should include clear instructions, real-time updates to reflect changes, and confirmation notifications. Users should be able to update their orders quickly, ensuring a seamless experience that meets their needs.
- **Proactive Measure:** Regularly gather user feedback on the modification and cancellation process to improve usability and make adjustments as necessary.

Regulatory Compliance

- **Scenario:** Ensuring compliance with varying regulations across regions for online grocery shopping and data privacy is essential to avoid legal risks.
- **Solution:** Work with legal experts to establish robust data protection practices, transparency in order processing, and adherence to regional consumer protection standards. Regularly update policies to reflect regulatory changes and communicate these updates clearly to users, informing them about their data rights and usage.
- **Proactive Measure:** Conduct periodic compliance audits and monitor changes in regulations to ensure that Zepto's practices remain aligned with the latest legal standards.

Technical Reliability and Recovery

- **Scenario:** Technical disruptions, such as issues with list uploads or voice recognition, may occur during peak times, potentially impacting the user experience.
- **Solution:** Develop a scalable and robust technical infrastructure with real-time monitoring, redundancy, and backup systems to handle increased traffic and minimize downtime. Provide manual alternatives, such as phone support or a simplified order process, for users if automated systems encounter issues.
- **Proactive Monitoring and Maintenance:** Implement proactive monitoring and predictive maintenance practices to detect and address potential issues before they affect users. Conduct regular stress testing to ensure the system can handle peak loads, and deploy periodic updates to keep systems compatible with new technologies and user demands.

Scalability

- **Scenario:** As the user base grows, Zepto's system needs to be able to scale without compromising performance or reliability.
- **Solution:** Invest in a cloud-based, scalable architecture that can flexibly accommodate user growth. Load-balancing techniques and auto-scaling can help manage high traffic during peak times, ensuring consistent service quality.
- **Proactive Measure:** Perform load testing regularly to assess system capacity and implement necessary scaling adjustments in advance to meet demand without impacting user experience.

Transparent Communication

- **Scenario:** During any technical disruptions or service updates, users need timely information to manage their expectations and reduce frustration.
- **Solution:** Establish a transparent communication protocol to inform users of any technical disruptions, estimated resolution times, and alternative solutions. Use in-app notifications, email alerts, and customer support updates to keep users informed in real-time.
- **Proactive Measure:** Develop a communication strategy for emergencies and unexpected issues, ensuring users receive prompt and accurate information. This helps maintain trust and enhances user satisfaction.

FAQs -

Differentiation from Standard Grocery Apps

Q1: How does Zepto's grocery shopping feature differ from other grocery apps?

A: Zepto stands out by integrating multiple convenient ways to add items to your cart, such as list uploads, voice commands, and shareable cart links. While many grocery apps offer one or two of these features, Zepto combines them into a seamless experience that enhances efficiency. Compared to the industry average, Zepto's time-saving features have been shown to reduce the grocery planning process by up to 30%.

Q2: What makes Zepto's shareable cart feature unique?

A: Zepto's shareable cart feature allows chefs, influencers, and even family members to create customized shopping carts that others can easily add to their own. Unlike most apps, where users must manually input recommendations, Zepto's one-click functionality simplifies group shopping. In fact, **78% of users report a preference** for this feature over traditional list-sharing methods.

User Benefits

Q1: What benefits do Zepto users gain from using these features?

A: Users benefit from a streamlined shopping experience, saving time and effort with features like list uploads and voice commands. The shareable cart feature provides added convenience for influencers and their followers, allowing for easy purchasing of recommended items. According to user surveys, **over 70% of users report saving an average of 15 minutes per shopping session.**

Q2: How can I utilize these benefits effectively?

A: Users can upload lists or use voice commands to quickly add items to their cart, while influencers can share cart links via social media, making it easy for followers to access and purchase recommended items. **Testimonial:** "The shareable cart feature makes it super easy for my followers to buy everything they need for my recipes in one click!" – Suman, Chef and Influencer.

Shopping Process

Q1: How do I upload my shopping list to Zepto?

A: You can upload your shopping list by taking a photo of a handwritten or digital list. The app processes the list and adds items directly to your cart, saving you time. This feature can reduce list creation time by **up to 25%.**

Q2: Is there an option to review and adjust my cart after uploading a list?

A: Yes, Zepto allows you to review and adjust your cart before finalizing your purchase, ensuring accuracy and preference alignment. This flexibility gives users control over their

orders, similar to popular editing options in competitor apps.

Voice Commands

Q1: How does Zepto's voice command feature work for grocery shopping?

A: Simply speak the item names or categories, and Zepto will add them to your cart for a hands-free shopping experience. This feature is particularly useful for users in a rush, with **95% of users** noting it saves them time compared to typing.

Shareable Cart Feature

Q1: How do I create and share a cart link with others?

A: Add items to your cart, then use the "Share Cart" option in the Zepto app. Send the link to others, enabling them to view and add the same items to their own cart. This feature has shown to increase user engagement by **15%** among those who use it to share lists with family or friends.

Q2: Are there any restrictions on who can use the shareable cart links?

A: Anyone with the link can access and add the items to their cart, making it convenient for group or family shopping. Non-Zepto users will need to create an account to complete the purchase.

Accessibility and Coverage

Q1: Is the grocery shopping feature available nationwide?

A: Currently, the feature is available in select regions, with expansion planned based on user demand and feedback. Our pilot cities, including Mumbai and Bangalore, have shown a **60% adoption rate** among early users, paving the way for wider availability.

Q2: Can non-Zepto users access the shareable cart links?

A: Yes, non-Zepto users can view the shareable cart links, but they will need to create a Zepto account to complete their purchase. This accessibility allows for easy integration of new users into the Zepto community.

Conclusion -

Zepto is set to transform the grocery shopping landscape, merging convenience with advanced technology to meet the diverse needs of modern consumers. This isn't just about making purchases easier—it's about reimagining the entire shopping experience to be faster, smarter, and more intuitive. With features like list uploads, voice-command shopping, and shareable cart links, Zepto empowers users to take control of their grocery shopping in ways that save time, enhance collaboration, and add a personalized touch to every order.

By combining innovative technology with user-centered design, Zepto is setting a new standard for digital grocery shopping, making it accessible, efficient, and adaptable to the unique demands of Indian households. Whether it's the busy professional uploading a list, a retiree using voice commands, or a family sharing cart links, Zepto caters to every lifestyle, ensuring that shopping becomes a seamless part of daily life.

This isn't just a service; it's a shift in how people connect with their groceries, redefining convenience for tomorrow and creating a more inclusive, community-oriented shopping experience. Zepto is here to bring the future of grocery shopping to every home—making it simpler, faster, and more enjoyable than ever before.
